THE PORTLAND MOTH: *OCHROPLEURA PRAECOX* L. IN SUSSEX — On 18th August 1980, Mr. Dyson and I set up our M. V. lamps in a wood 9 miles north of Brighton; when, to our surprise, a somewhat worn *O. praecox* alighted on my sheet. Mr. Colin Pratt tells me that this is the third record only of this moth in Sussex apart from two larvae found in West Sussex. — Dr. J. V. BANNER, 41, Varn-dean Gardens, Brighton BN1 6WJ.

THECLA QUERCUS L. (PURPLE HAIRSTREAK): AN UNUSUAL VISITOR TO MV. — On August 15th 1980, MV at Broxbourne Wood, Hertfordshire, attracted, sharp on 11 p.m., a male *T. quercus*. — RODERICK LOVELL-PANK, 33 The Highlands, Hatfield Road, Potters Bar, Herts EN6 4HU.

ADDITIONAL KENT RECORDS OF *HERINGOCRANIA CHRYSOLEPIDELLA* Z. — Further to my note on this moth (in *Ent. Rec.*, 93 : 71), I found tenanted mines of *H. chrysolepidella* in 1981 on hazel on 12th May at Longton Wood, Thurnham, Kent; and on hornbeam on 21st May at Finch Wood, Bonnington, Kent. — N. F. HEAL, 'Fosters', Detling Hill, Nr. Maidstone, Kent.
